Practicum #5: Administering Ophthalmic Medication

“Frank” the Dachshund has been diagnosed with a corneal ulcer and the veterinarian prescribed antibiotic drops (see script below). Using saline drops, you are asked to teach the owner how to correctly apply the eye medication.

Ofloxacin ophthalmic 0.02%

Apply 2 drops to the left eye once every 8 hours until recheck.

Please explain each step as you perform it.

Practicum #7: Administer Oral Tablet/Capsule

Mr. Oglesby brought his dog “Buckeye” to board for the week but forgot his arthritis medication. Dr. Mask asked you to medicate Buckeye from the pharmacy stock. See his order below.

Rimadyl 75mg

Give 1 tablet by mouth once every 24 hours.

Please explain each step as you perform it.

Practicum #8: Prescription Filling

Dr. Birch has prescribed an anti-inflammatory for Mr. Millett's dog "Hillary." She asks you to write out the prescription label (index card) and then fill the script based on her orders.

Rimadyl 25 mg #14 1 PO BID

Please explain each step as you perform it.
