3	12.3	0.8	89	122.6	26.9	156.2	90.21
4	13.1	1.8	90	125.9	29.9	160.8	91.8
5	12.4	1.6	88	120.4	24.1	150.3	88.4
6	10.2	2.9	79	114.2	24.1	135	79.6
7	12.4	2.2	80	117.3	22.2	135.2	78.76
8	8	4.6	78	115	23.8	128.6	76.32
<i>Breed Averages</i>	<i>11.1</i>	<i>1.5</i>	<i>78</i>	<i>116.2</i>	<i>23.3</i>	<i>131.1</i>	<i>78.74</i>

API = All Productivity Index

TI = Terminal Index

Scenario:

Rank these females to be used as replacements in a progressive Simmental operation in the midwest. This firm aggressively utilizes conventional and in-vitro embryo transfers to produce consistent progeny groups of superior types of females to be marketed in an annual production sale each fall. A top-cut of the progeny will be haltered and marketed as elite show prospects. Further, the additional sale features and high sellers for this program are popular due to their strong maternal EPD profiles, eye-appeal, and ultra-functional design.
