*HP = Heifer Pregnancy

Rank these bulls to be used in a progressive Purebred Angus operation in Southern Indiana to be utilized natural service behind a strict Artificial Insemination program; the bull selected will be turned out with a set of 3-5 year old cows. The primary source of income for this operation is through an annual bull sale and a select group of females are sold privately each year to loyal customers. The progressive use of data collection and genomic technologies and the resulting genetic predictors have given them a national appeal to both commercial and purebred operations.
