

TIMBER CRUISING FOR BOARD VOLUME

Each participant will measure ten pre-numbered trees on a plot for board foot volume. Participants should assume plot is 1 acre in size.

The participant must record the DBH (Diameter Breast Height) to the nearest one-inch class and the merchantable height of each tree height rounded down to the nearest $\frac{1}{2}$ log.

The following minimum diameters and log length will be:

Minimum Saw Timber DBH 10 inches

Minimum Top Diameter 10 inches DIB

Minimum Height 16 feet

Each participant will be allowed 30 minutes to complete this practicum.
