

# **National Forestry CDE 2017**

## ***Forestry Issues Presentation Team Activity***

### **General Issues Topics:**

What forestry best management practices (BMPs) are used in your state and why?

### **Scenario:**

Your logging operation has been awarded a contract to harvest timber on a hilly property with a major stream dividing the harvest site. While doing a site survey with the land owner you notice the stream has an active water flow, is high banked and already showing signs of possible erosion. The land owner has expressed concern with maintaining the integrity of the stream and its banks and inquires about the different options available to meet his concerns. You are familiar with these challenges and implement many BMP's at the various harvest sites you've worked in the past. What forestry BMP's are used in your state and why?
