

2019 National FFA Floriculture Career Development Event

Hazardous Situation

Activity Scenario

Your teacher has just appointed you the new greenhouse manager at your high school. While on your first walk through you find a compressed unlabeled air sprayer half full of an unknown chemical. You ask your classmates and your teacher and find out it is either Marathon or Safari and was used to spray whiteflies on the school Poinsettia crop. No one can tell you for certain which chemical is in the sprayer. What should you do with the left-over chemicals and the sprayer?
