Practicum #1: Administering Ophthalmic Medication

Toby, a 3 year old male neutered dachshund has been presented to Dr. Smith today for a 2 day history of eye discharge. Dr. Smith would like for you to show Toby's owner, Ms. Williams how she will need to take care of his eye at home. He has written instructions for use as follows:

Triple Antibiotic Ophthalmic Drops 1 drop OU TID for 10 days

Please show Ms. Williams how to administer the ophthalmic medication while verbally describing her through each step.

Practicum #2: Filling a Syringe

Dr. Little instructs you to give a hospitalized patient a medication in the form of a subcutaneous injection. Please use the following instructions to draw up the appropriate amount of medication into a syringe utilizing a needle of appropriate size and gauge. Verbally describe each step as you prepare the medication.

1 ml Baytril SQ q 12 hours
